

Introducing the Edimax Pro Office Wi-Fi System, Office 1-2-3, the dedicated design for simple and secure office Wi-Fi system for SMB

Taipei, Taiwan – Nov. 27, 2017

Edimax Technology, a leading networking solutions provider, today introduced a new Office Wi-Fi System, Office 1-2-3 3-pack ceiling mount access point, added to the Edimax Pro product line for the SMB (Small and Medium Business) offices.

Generally, the complicated installation and configuration steps have always been troublesome and annoying for SMB network managers. On top of that, Wi-Fi security is another concern for adapting the Wi-Fi System by the SMB office itself. To combat these nuisances, Edimax devoted itself into the development the Office 1-2-3, the simple and secure Wi-Fi system, for SMB.

More than just a simple and secure Wi-Fi system, the Edimax Office 1-2-3 is a complete system that is expandable for up to 16 access points with the business growth (basic 3-pack system supports up to 100 employees) and fully designed to meet the needs of SMB offices. The industrial-grade performance and built-quality, combining easy operation, super-fast wireless speed, extensive feature set and practical, ceiling-mount design make it the ideal solution for modern business environments – in working areas, meeting rooms, lobby or open spaces.

Simple and Secure Wi-Fi System for SMB office

The Office 1-2-3 Office Wi-Fi System starter kit comes with three pre-configured access points that can communicate between themselves. One AP is default as the master AP to manage the rest. For secure Wi-Fi access and management, 3 Wi-Fi networks of office employee, guest and Wi-Fi device are separated by default, and managed with intuitive icon-based user interface. Each of these Wi-Fi networks has different login authentication. Best of all, the APs are self-managed and pre-configured without the need for a controller or server and no extra license fee.

License-Free Intuitive UI, Simple yet Powerful

Built-in with the AP management software, no need for server or controller software and no extra license fee that saves total cost of ownership (TCO). The icon-based user interface of Office 1-2-3 can easily walk you through the entire process of setting up the Wi-Fi networks. Some features include import and export lists for simple client management, account ticket printing management, customization of captive portal(s) for your office, E-MAP function displaying floor plan with AP location and Wi-Fi coverage for easy deployment, etc. All major functions of a much bigger system – all covered in Office 1-2-3.

Enhanced Performance with Advanced Wi-Fi Features

Featuring the latest IEEE 802.11ac Wave 2 technology for dual-band wireless (speed of up to 1300Mbps), Office 1-2-3 supports MU-MIMO (Multiple User – Multiple In, Multiple Out) with enhanced device capacity, Beamforming, AirTime Fairness, and Band Steering that improves Wi-Fi range, reliability and performance. Moreover, multiple SSIDs can be configured for different departments or user groups. A built-in RADIUS server provides additional verification with a scalable AP array architecture for central management of multiple access points.

Expandable and Flexible Wi-Fi System

Office 1-2-3 Office Wi-Fi System comes with three APs by default and is expandable with Office +1 AP, up to a total of 16 APs. With high-density capacity for up to 100 simultaneous users per AP, this is ideal for BYOE (Bring Your Own Everything) workplaces likely to have a high volume of users and wireless devices. Power over Ethernet (PoE) support adds deployment flexibility and extensive network options for company MIS departments and network administrators.
