

# How to upgrade the firmware on the Edimax router?

Author: Longcent

(2006-12-8)

This FAQ is applied to the following models:

All series of the Edimax Broadband Routers.

## Introduction:

Firmware is a software that is embedded in the router. It's a binary image file that can be upgraded in the router by the end user using a web browser (Windows IE, Firefox, mozilla, netscape etc. Edimax will publish the latest firmware in the web site periodically. It's suggested not to conduct firmware upgrade unless there is a severe bug in the current firmware of the router.

## Steps by Steps:

Step 1 : Download the latest firmware from Edimax web site at [www.edimax.com.tw](http://www.edimax.com.tw), and store it on the Desktop of your PC.

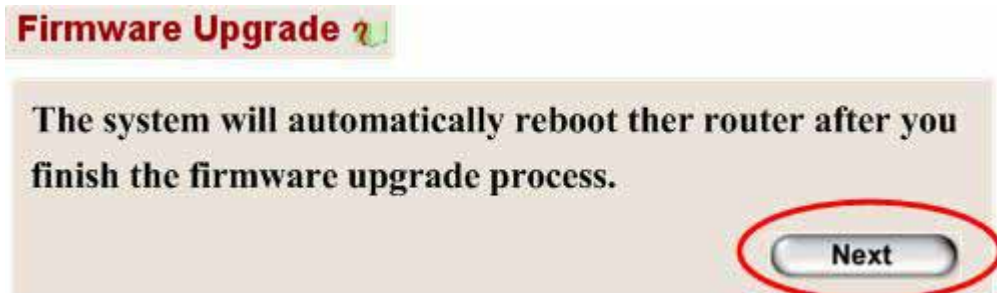

Step 2 : Download the latest firmware from Edimax web site at

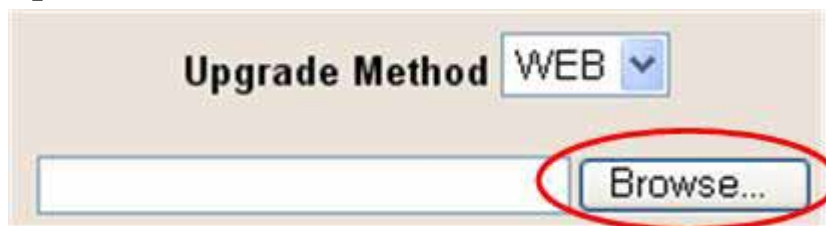

Step 3 : Click "Firmware Upgrade".

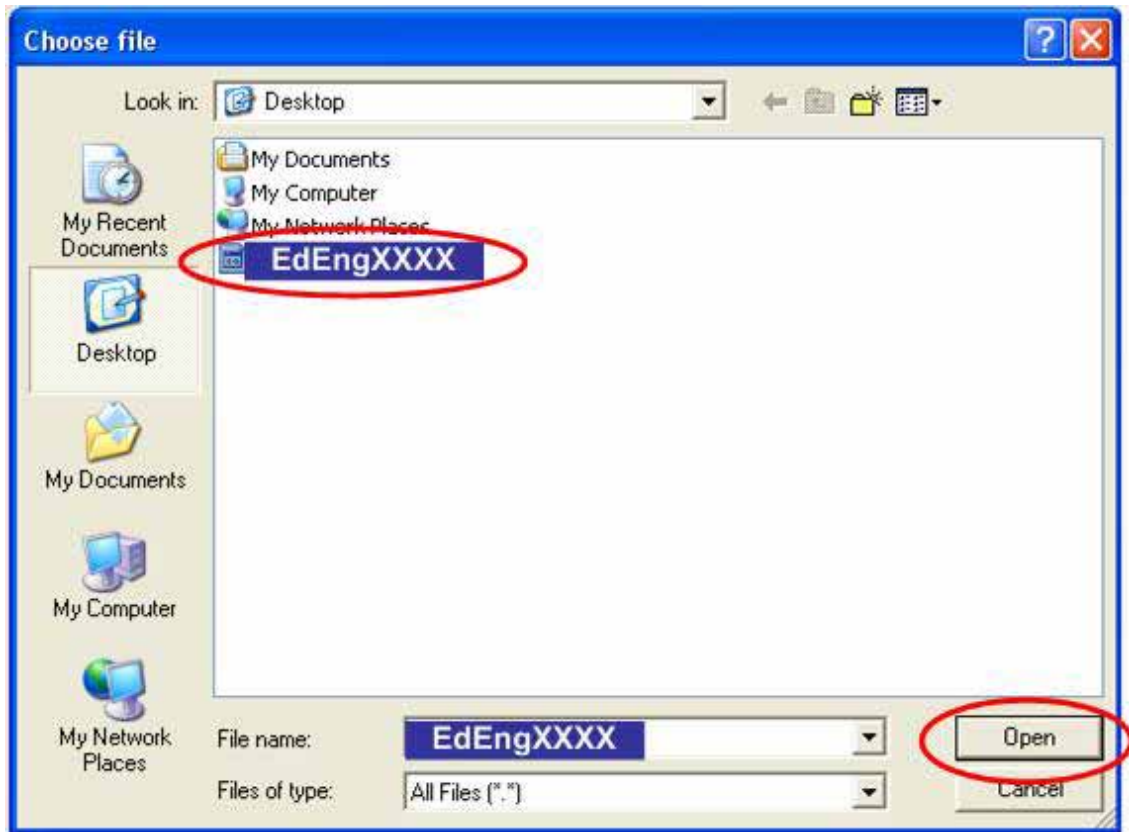

- Step 4 : Click “Next” .

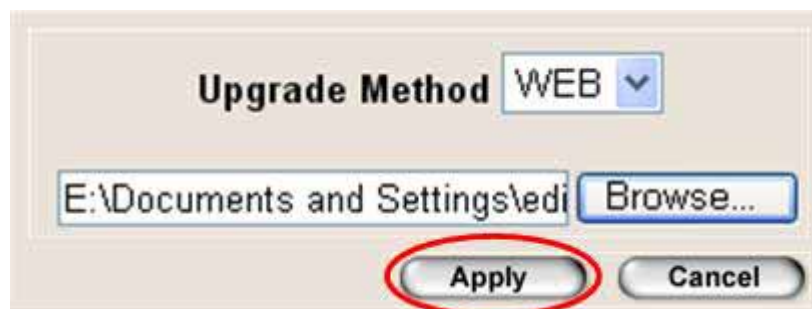

- Step 5 : Click “Browse” .

- Step 6 : Click the firmware file in the Desktop and click “Open”.

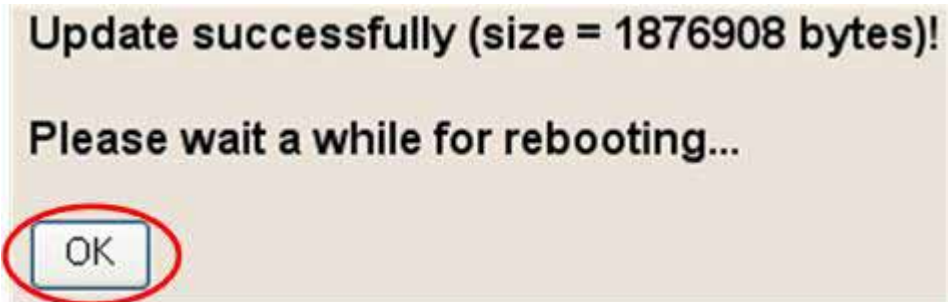

**Step 7 : Click “Apply”.**

**Step 8 : Click “OK”.**

**The operation of firmware upgrade is finished at this stage. Please wait about 1 minute for the automatic reboot of the router and not to power off or disconnect the router, otherwise the router may be faulty.**
