

From wireless routers to mobile 3G routers to IP cameras, Edimax made sure they brought out all their coolest and latest gadgets

New Breed Of Surveillance & Security Products

EDIMAX IP SURVEILLANCE SEMINAR

Mr. Albert Chang, Senior Director, OBM Product Marketing Division, Edimax Technology Co. Ltd. kick started the event with a brief welcome speech

Mr. Kenneth Teh, Managing Director, South East Asia, Edimax Technology (SE Asia) Pte. Ltd. gave a brief introduction on Edimax and also some of its more attractive products like the sleek n150 wireless nano travel router

● In an age where everything is going digital, Edimax Technology is doing its best to bring the video surveillance industry into the digital networking age. To help them achieve this goal, Edimax have been hosting a series of IP surveillance seminars. The first seminar was held in Singapore on 5 August, followed by Kuala Lumpur on 9 August and the last seminar took place in Jakarta on 11 August. HWM was lucky enough to be invited for the seminar as it made its way here.

During the seminar, Edimax introduced and gave live demonstrations of its IP surveillance and SMB networking solutions which included PoE switches, video servers, network video recorders, wireless solutions, central management software and network cameras. Edimax also set up display areas where attendees could get a more hands-on experience with the products.

To help accelerate the process of bringing the video surveillance industry into the digital networking age, Edimax Technology has integrated their expertise in both, the networking and video surveillance fields and officially entered the professional IP surveillance market. Edimax is also in command of technology that allows them to develop video content analysis systems and high-definition network cameras that do not compromise bandwidth for resolution. With expertise in networking and video surveillance, Edimax IP surveillance solutions allows for the perfect networking infrastructure and surveillance equipment integration.

Part of the seminar also saw Edimax introducing a complete range of SMB

networking and IP surveillance solutions for enterprise, campus, chain store, traffic and other applications. These solutions consist of products like 3-megapixel network cameras for indoor and outdoor use, 64-channel management software, a 4-channel network video recorder and a variety of PoE switches.

Edimax can also help system integrators, distributors, ISP vendors and telecom solution partners to win vertical markets with their IP surveillance and SMB networking solutions. With all these solutions being offered by Edimax, customers will definitely be able to save on equipment and installation costs as Edimax IP surveillance solutions are able to upgrade existing CCTV systems into highly manageable IP surveillance systems.

Edimax also set up a live demonstration area so attendees could see just how clear and smooth their IP cameras are
